

Evidence

Turning complex data into clarity

CMS Evidence combines expertise and AI-powered technology to save you time, money and effort when it matters most.

CMS Evidence is a leading in-house eDiscovery and eDisclosure service, combining evidence collection, review and disclosure technology to support litigation, investigations, arbitration, tribunals, regulatory and compliance matters. Combining advanced technology, generative AI and specialist expertise, our data intelligence capabilities help clients uncover critical information quickly and turn complex data into actionable insights.

Why choose CMS Evidence?

Advanced Technology

Rapid access to critical information through RelativityAir, generative AI and advanced analytics, helping identify key issues, themes, relationships and risks across large datasets in hours.

Global Reach

Review capabilities in over 100 languages, global collaboration across 17 countries with data centres in the UK, Germany and Switzerland provide support for complex cross-border matters.

Transparent Collaboration

Secure access to critical documents, irrespective of geography or time zone, providing transparent progress updates throughout.

Security Driven

By default, your data is encrypted and subject to robust controls, ensuring access rights are allocated on a specific basis and for a defined timescale.

Quality Results

Consistent, quality-controlled results through carefully designed workflows, agreed checkpoints and project managed by our expert team.

Integrated Approach

Our in-house team works alongside your legal team from the outset, providing seamless support and a joined-up approach throughout the matter.

Our services extend beyond disclosure to include data breach response, compliance and audit investigations, DSAR support, personal data review, PII identification, cleansing and redaction, and broader data advisory services, delivering end-to-end support across evidence and data management.

How can CMS Evidence help you?

CMS Evidence combines specialist expertise with leading legal technology to provide a consistent, quality-controlled approach to evidence and data management. Working as an integrated part of your legal team, we help you identify what matters faster, manage complexity and reduce time, cost and risk. This combination helps you to:

Save time

Our integrated in-house team works alongside your legal team, so no time is lost bringing external suppliers up to speed. Combined with RelativityAir, advanced analytics and AI-powered review, we can manage large volumes of data and quickly identify key issues across litigation, investigations and compliance efforts.

Case study

When a client provided 750,000 documents as part of an initial review in an anti-bribery investigation, we were able to present our preliminary findings in just two hours.

Save money

Save up to 50% compared to external providers. Our specialist team uses proven workflows and AI-enabled technology to reduce costs.

Case study

When a client received 2.3 million documents in disclosure from a bankrupt company, we were able to save them approximately £10,000 every month by hosting the data on our platforms.

Receive quality results

Our industry-recognised professionals combine expert consulting with end-to-end data management, providing a consistent approach across collection, hosting, forensic analysis, review, disclosure and data intelligence.

Case study

When a client was involved in a complex disclosure, our experts were able to remove one third of the documents from the review pool as non-relevant – a 10 x increase in the review rate.
