AI Literacy eLearning

Course overview

This course helps you understand AI and machine learning and aims to enhance your knowledge on the ethical issues related to such techniques.

Audience

This course is suitable for all staff within an organisation, especially where the organisation has an AI ethics governance framework that includes an objective to educate staff. Previous knowledge of AI is not needed.

Learning objectives

— to understand that AI algorithms are influencing our lives already
— to realise that it is difficult to give AI algorithms ethical values
— to have a high level understanding of machine learning
— to understand why it is difficult to explain decisions made by machine learning algorithms in a human understandable way
— to understand why machine learning algorithms sometimes have unwanted bias
— to think about whether machines or humans should be accountable for harm caused by AI algorithms

Features:

— content provided by experienced CMS lawyers
— customisable content to suit your organisation
— interactive exercises and examples
— fully mobile responsive
— end of course knowledge check
— can be made available in multiple languages if required

Duration: 30 minutes

Language: English

Publish formats:

— LMS: SCORM 1.2 / 2004 / AICC
— Web / HTML
— PDF (for offline)
